Sub Total			-64.18
Plus : GST			-6.42
Total This NMI			\$-70.60

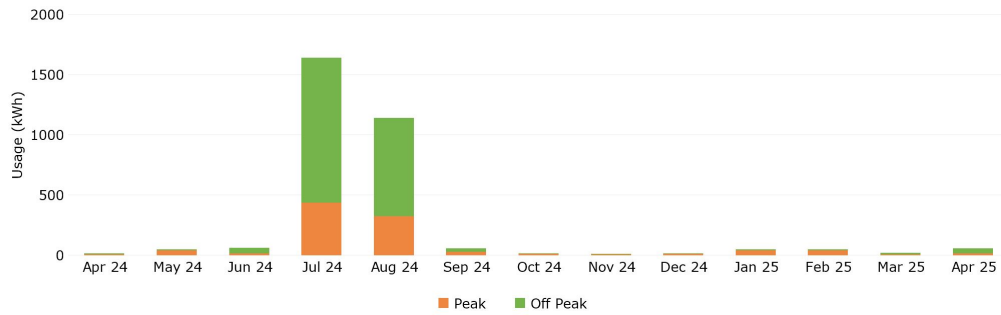

This bill may include charges due to changes in law and/or changes in your Median Peak Load. If so, the charges are passed through at cost and the charges are explained on a later page of this invoice.

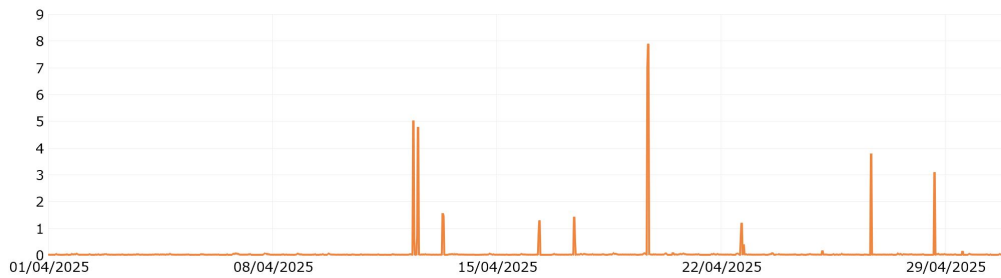

Billing Summary

Issue Date:	08/05/2025	Max Peak 30 Minute Demand (kWh):	3.09
Start Time:	01/04/2025	Average Peak 30 Minute Demand (kWh):	0.02
Finish Time:	01/05/2025	Monthly kW Load Factor:	0%
Number of Days:	30	Distribution Loss Factor:	1.0454
Peak Consumption (kWh):	13.17	12 Month Max kVA:	47.6960
Off-Peak Consumption (kWh):	42.00	Average Daily Cost:	-\$2.35
Total Consumption (kWh):	55.17	Average Daily Usage (kWh):	1.84

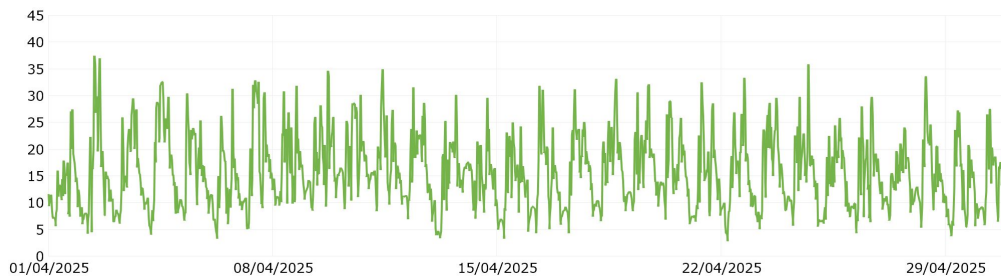

13 Month Historical Usage Chart

Daily Usage kWh

Daily Usage kVA

Western Power Network AA5 Tariff Increase:

Western Power transmission charges have increased from 1st July 2024. The average increase across all network tariffs is just under 10%. A major overhaul of transmission tariffs on 1st July 2023 resulted in the implementation of the Access Arrangement 5 (AA5) transmission tariff structure. Many existing transmission tariffs have increased substantially, and new transmission tariffs have been added. Amanda optimizes the tariff selection for your meter. For customers with a "bundled" Electricity Supply Agreement (ESA) this charge is included in your "bundled" electricity charge, at the relevant network fee at the time of the ESA. Any net increase or decrease in transmission cost may be passed through at cost. For customers with an "unbundled" ESA, the charge is passed through each month.

AEMO Essential System Services adjustment:

The Market Rules changed on 1st October 2023. One of the changes was Ancillary Services (AS) and the corresponding charge was replaced by Essential System Services (ESS) and a corresponding new charge. For customers with a "bundled" Electricity Supply Agreement (ESA), the Ancillary Services charge was included in your bundled electricity charge, at the relevant AS fee at the time of the ESA. Any net increase or decrease in cost in ESS compared to AS may be passed through at cost. For customers with an "unbundled" ESA, the charge is passed through each month.

AEMO Market Fees adjustment:

The Australian Energy Market Operator (AEMO) levies a market fee to fund the functions performed by the AEMO, such as market operations services, system planning services, and market administration services. These market fees are adjusted each July. For customers with a "bundled" Electricity Supply Agreement (ESA), the Market Fee is initially included in your "bundled" electricity charge, at the relevant Market Fee at the time of the ESA. For customers with an "unbundled" ESA, the charge is passed through each month.

Clean Energy STP Pass-Through adjustment:

The Clean Energy Regulator (CER) changes the Small scale Technology Percentage (STP) each Calendar Year and must publish the updated STP by 31st March, backdated as effective from January that year. Inevitably, this requires a retrospective credit or debit adjustment for the first few months of the Calendar Year and then reverts to a monthly adjustment. For Calendar 2024 the STP was 21.26%. For Calendar 2025 the STP is 13.89%. Energy Retailers are liable to pay for and surrender Small scale Technology Certificates (STCs) on the customer's behalf calculated using the STP and your consumption. For customers with a "bundled" Electricity Supply Agreement (ESA) the Clean Energy charge is initially included in your "bundled" electricity charge, at the relevant STP rate at the time of the ESA. For customers with an "unbundled" ESA, the charge is passed through each month. Any net increase or decrease in cost due to a change in the percentage may be passed through at cost.

Clean Energy RPP Pass-Through adjustment:

The Clean Energy Regulator (CER) changes the Renewable Power Percentage (RPP) each Calendar Year and must publish the updated RPP by 31st March, backdated as effective from January that year. Inevitably, this requires a retrospective credit or debit adjustment for the first few months of the Calendar Year and then reverts to a monthly adjustment. For Calendar 2024 the RPP was 18.48%. For Calendar 2025 the RPP is 17.91%. Energy Retailers are liable to pay for and surrender Large scale Technology Certificates (LGCs) on the customer's behalf calculated using the RPP and your consumption. For customers with a "bundled" Electricity Supply Agreement (ESA) the Clean Energy charge is initially included in your "bundled" electricity charge, at the relevant RPP rate at the time of the ESA. For customers with an "unbundled" ESA, the charge is passed through each month. Any net increase or decrease in cost due to a change in the percentage may be passed through at cost.
